- **Revisa cuidadosamente la prueba antes de entregarla.**

A. COMPRENSIÓN DE UN TEXTO. (4 puntos)

UK leads world in mobile web use.

Britain has become a gadget-obsessed nation, watching more television online and using smartphones and tablets to access the web more than any of the world’s leading economies, according to new research.

The British love of the latest devices has even seen the UK leave Japan behind in mobile internet use, according to a new report from the UK media regulator *Ofcom*. The research compared data across 17 countries, including the US, China, India, Russia, Brazil, Sweden, France and Germany.

An obsession with Facebook, Twitter and videos on YouTube has seen UK consumers download 424 megabytes of data each per month on their smartphones and tablets. The percentage is almost 60% more than a year ago.

Much of the increase in use of mobile devices, especially smartphones, has been driven by the popularity of social networking websites such as Facebook and Twitter, with 40% of UK adults accessing their profiles on the move. British 18- to-24-year-olds are the world’s top mobile social networkers, with 62% accessing their profiles from smartphones and tablets.

UK internet users spent an average of 728 minutes (more than 12 hours) a week online in total, although this is a slight reduction from the 746 minutes recorded in the last report.

The British love of the latest gadgets is also seen in the changing face of the living room. Almost 24% of TVs sold in the UK in the first quarter of this year were "super large" - bigger than 84cm.

The popularity of video-on-demand services such as the *BBC’s iPlayer* has made British people the most likely to watch TV online. Almost a quarter of the British use an online TV service each week, ahead of second placed US on 17%

Despite the rise of digital technology, TV viewing is showing no signs of losing its popularity. TV viewing in the UK has remained stable at 242 minutes – more than four hours per person daily.
