“Electric cars are already cheaper to own and run” says ICCT Report

Petrol and diesel vehicles cost more over four years in UK and four other European nations.

Electric cars are already cheaper to own and run than petrol or diesel alternatives in five European countries analysed in new research.

The study examined the purchase, fuel and tax costs of Europe’s bestselling car, the VW golf, in its battery electric, hybrid, petrol and diesel versions. Over four years, the pure electric version was the cheapest in all places – UK, Germany, France, Netherlands and Norway.

Carbon emissions from transport are a big contributor to global warming, but have been rising in recent years in the European Union. Vehicles are also a source of much air pollution, which causes 500,000 early deaths a year in the EU.

Electric cars offer the biggest savings over diesel in Norway (27%) as the battery-powered vehicles are exempt from a heavy registration tax. The ICCT analysis shows British drivers see the smallest saving – 5%. In Germany, France and the Netherlands, the saving varied from 11% to 15%.

Experts said financial incentives for electric cars would not be needed when purchase prices fall to that of fossil-fuel powered cars, which is likely between 2025 and 2030.

Cost is not the only factor, the analysts said. While electric car owners can also benefit from reduced parking and road toll charges, they need to be confident there are sufficient charging points.

Governments could do more to drive the growth of electric cars and also to steer the market away from the most polluting and inefficient cars. These large, heavy vehicles burden us and the climate with unnecessary CO₂ and air pollutants. (**Text adapted from The Guardian, 12th February, 2019**)
